SUMMARY

I'm a researcher dedicated to advancing next-generation cellular and wireless networks, with a focus on 5G and beyond. My work involves creating programmable 5G testbeds, analyzing real-world network performance, and leveraging AI models to enhance network quality for latency-sensitive applications.

EDUCATION

- **Northeastern University** — Boston, MA
  Ph.D. in Computer Engineering — Jan 2021 - May 2025(expected)
- **Southern Illinois University Carbondale** — Carbondale, IL
  Masters of Science in Electrical and Computer Engineering — Jan 2018 - July 2020
- **Bangladesh University of Engineering and Technology**
  Bachelor of Science in Electrical and Electronic Engineering — Dhaka, Bangladesh

EXPERIENCE

- **Northeastern University** — Boston, MA
  Graduate Research Assistant — Advisor: Dimitrios Koutsonikolas — Jan 2021 - Present
  - Worked on the project **X5G**: An Open, Programmable Platform to Conquer the 5G and 6G Wireless Spectrum. This project involved procuring the hardware and software necessary to build an 8-node O-RAN compliant 5G experimental testbed. Developed Xn-handover measurement report handling for the OAI codebase.
  - Worked on performance evolution study of 5G networks. The first phase included developing an **Android application** to measure 5G bandwidth and latency for building and analyzing a year-long crowd-sourced dataset. The final phase involved analyzing a dataset provided by Ookla ®, comprising over 2.65 million mobile network measurements (4-year period) from around the world.
  - Investigated the feasibility of predicting fine-grained throughput (100 ms granularity) in real-world cellular networks, integrating mixed LTE/5G technologies.
  - Conducted an in-depth measurement study on user-perceived experience, evaluating network coverage, performance, and quality of experience (QoE) for latency-sensitive 5G applications (e.g., Low-latency live streaming, AR, 360°video streaming, and online gaming). The study involved analyzing low-level 5G metrics and signaling messages to correlate with application performance.
  - Employed bandwidth aggregation (802.11ad, 802.11ac, & Cellular) with MultiPath TCP on smartphones and exploring the impact on power consumption and resource utilization. Ported 10K+ lines of Multipath TCP source code into Android Kernels for COTS UE (Asus ROG II, Pixel 5).
  - Conducted experiments and analysis with 60GHz devices (smartphones, laptops) and Access Points to understand the challenges of mm-Wave networks.
- **AT&T Labs. Inc** — Boston, MA
  Research Intern & External Collaborator — June 2021 - May 2022
  - Investigated the impact on QoE of low-latency video streaming application over 5G networks

Source Code and Dataset

- **Dataset** for Cross-Sectional, Year-Long Study of 5G Uplink Performance. [IFIP 2024]
- **Dataset** for Predictability of Fine-grained Cellular Network Throughput using Machine Learning Models.
  [IEEE MASS 2024]
- **Dataset** for 5G network performance on the wheels. [ACM IMC 2023]
- **Android app** NextG-UP app for a crowd-sourcing based measurement study of 5G uplink performance
  evolution.
- MPTCP **source code** for Pixel-5 Phone.
- MPTCP **source code** for an ROG Phone 2, from our WiNTECH 2021 paper.

Skills Summary

- **Languages**: C, C++, Python, Android, Unix/Kernel Programming
- **Tools**: XCAL-Accuver (5G signaling message analysing tool), RuSIM, Spectrum Analyzer, Wireshark
- **Protocols**: TCP/MPTCP/UDP protocols and their implementation (Linux Source Codes), IEEE 802.11
  ax/ad/ac/b/g/n standards, NR/LTE 3GPP standards

Honors and Awards

- Reviewer : Computer Networks 2024, IEEE Internet of Things 2024, IEEE GLOBECOM 2021, IEEE ICC
  2024
- Web Chair: IEEE LANMAN 2024, WoWMoM 2023
- TPC Member: IEEE WCNC [2023, 2024]
- Got selected for NSF Funded Student travel grant for Mobicom'2021
- Got selected for NSF Funded POWDER Network and Wireless Week, Salt Lake City , Utah 2019
